## PLEASE INCORPORATE THE BELOW CHANGES TO SOLICITATION DTFANM-12-R-00111:

## Clarifications:

- 1) Reference Sheet E/G Building Room 104
  - a. There are approximately 20 protrusions of various sizes ranging from 3/4" to 4" going through the walls of the building. These protrusions consist of electrical conduit, water pipes, drain outlets, etc.... The scope of work includes caulking around these protrusions.
  - b. There are 8 large diameter pipes with face plates (approx. 12" to 18"). These too shall be caulked around and sealed.

## Questions/Answers:

- 1) Looking for a drawing labeled "Facility Baseline Layout Control Wing South 2 Floor Plan Part 3". Where is it?
  - Drawing is now attached
- 2) One of the items on that drawing in item 1 above described removing 2 rows of brick and a "New cavity wall flashing with end dams at each side". I do not understand what that this is describing. Do you have any Drawing Details of this work?
  - There is a leak coming through the bricks. A leak expert suggested we fix it by the procedure noted on the drawing. There is no detail.
- 3) Is the existing lightning protection system to be removed and re-install in the same locations by the roofing contractor utilizing the existing system components?

  Most of the components can be reused however there will be some that have to be replaced (i.e the clips to the roof and the parapet cap.) Anything that is holding the components in place and is attached to the building, roofing, flashing, cap, etc will most likely have to be replaced.
- 4) Is the existing lightning protection system to be un-installed and re-installed by a certified lightning protection system contractor and the whole system to be updated to current codes and re-certified?
  - A certified lightning protection system contractor is not required and the whole system is NOT to be updated to current codes and re-certified. As stated in the drawings. Remove and place back in it's original location.
